Fact Sheet: The Biden Administration to Begin Distributing At-Home, Rapid COVID-19 Tests to Americans for Free

 [BRIEFING ROOM](#) [STATEMENTS AND RELEASES](#)

The Biden Administration is Buying One Billion Tests to Give to Americans for Free; Online Ordering of a Half-Billion Tests Begins on January 19th; Builds on Significant Actions to Expand Testing Capacity and Increase Access to Free Testing

Testing is an important tool to help mitigate the spread of COVID-19. Public health experts and the Centers for Disease Control and Prevention recommend that Americans use at-home tests if they begin to have symptoms, at least five days after coming in close contact with someone who has COVID-19, or are gathering indoors with a group of people who are at risk of severe disease or unvaccinated.

To help ensure Americans have tests on hand if a need arises, the Biden Administration is purchasing one billion at-home, rapid COVID-19 tests to give to Americans for free. A half-billion tests will be available for order on

Business Address

- **Description:** Test kits were only available to residential addresses, not business addresses. If an address was identified as a business, it was flagged and prevented from receiving kits.
- **Example:**
 - **Address:** 123 Main St, Suite 200.
 - **Issue:** The address is registered as an office building or commercial establishment rather than a residential property.
 - **Resolution:** The system would reject the request or flag it for manual review to determine eligibility.

Shared Address

- **Description:** Multiple households might share the same address (e.g., apartment complexes or housing units), and the system sometimes treated them as a single unit, limiting test kits.
- **Example:**
 - **Address:** 456 Elm St, Apt 3A and 456 Elm St, Apt 3B.
 - **Issue:** The system might interpret these as duplicate requests for the same base address (456 Elm St).
 - **Resolution:** Additional details (e.g., apartment or unit numbers) were required to distinguish households.

Multiple Address

- **Description:** Some properties had multiple valid addresses due to aliasing or historical records, leading to confusion or duplicate flags.
- **Example:**
 - **Address:** 789 Maple Ave and 789 Maple Drive.
 - **Issue:** Both addresses refer to the same property, but the system treated them as two distinct households or flagged one as a duplicate.
 - **Resolution:** Address standardization tools resolved aliases to a single primary address.

Duplicate Address

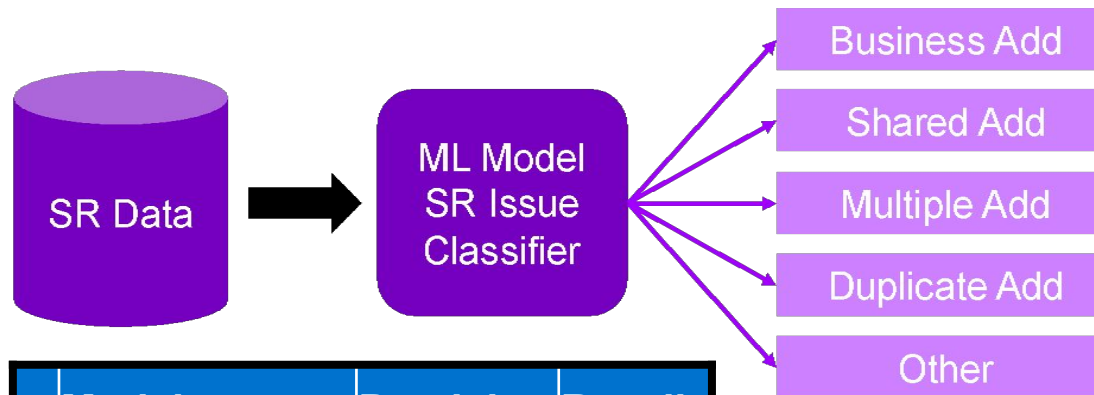

- **Description:** The same address was submitted multiple times by different residents or by the same household trying to request more than the allowable number of kits.
- **Example:**
 - **Address:** 1010 Pine St.
 - **Issue:** John Doe and Jane Doe both submitted requests for the same address, resulting in duplicate submissions.
 - **Resolution:** The system flagged and processed only one request per household.

Other

- **Description:** Miscellaneous issues that didn't fit into the other categories, such as incomplete, improperly formatted, or unverifiable addresses.
- **Example:**
 - **Address:** PO Box 123 or "Corner of Oak St and 2nd Ave."
 - **Issue:** A PO Box was provided instead of a physical residential address, or the address lacked sufficient detail to be validated by USPS systems.
 - **Resolution:** These cases required manual review or clarification from the requester.

An AI/NLP Application to Resolve Service Requests (SR)

AI NLP to resolve 300K requests for missed service

	Model	Precision	Recall
1	Regression	78.5	77
2	SVM	81	80
3	Naive Bayes	74.2	73
4	Decision Tree	76.5	75
5	Random Forest	83.5	82
6	Neural Network	82	81

150 randomly sampled cases

- 2 USPS workers reviewed 50 cases
- Agreed on 42/50 cases
- 84% Agreement

USPS could/would not resolve disagreement

Expert Humans Often Disagree

Address resolution
Disagreement = 17%

Online Extremism

Disagreement = 32%

Hypertension Claim
Missing Data = 72%

Inter-annotator agreement (IAA) measures the level of consistency in data labeling.

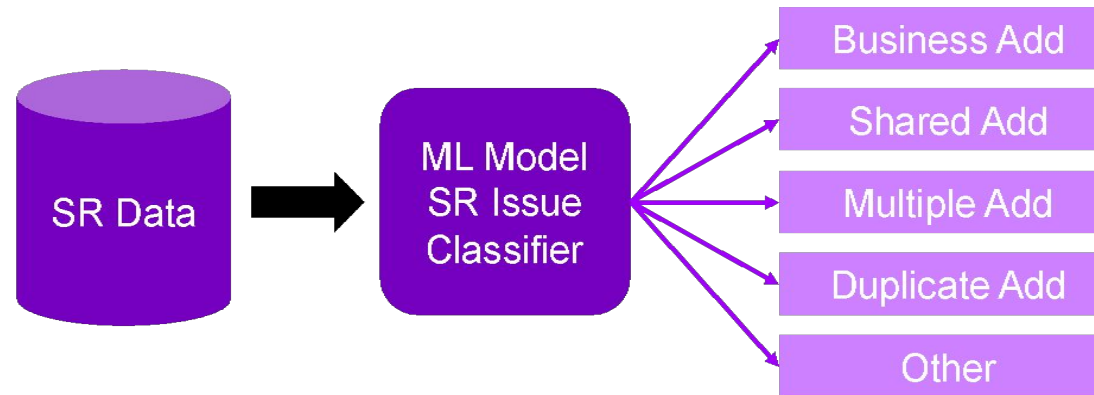

Data label consistency improves AI/ML precision in classification.

HOW DO YOU IMPLEMENT DECISIONS SR RESOLUTION

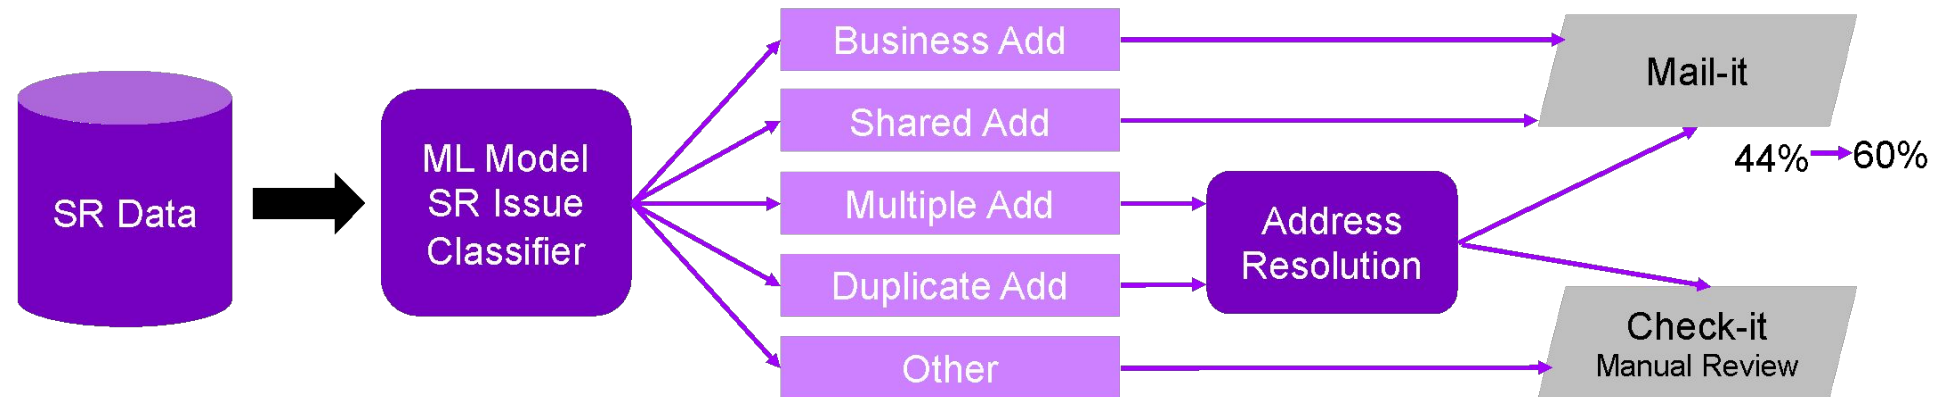

AI NLP to resolve 300K requests for missed service

	Model	Precision	Recall
1	Regression	78.5	77
2	SVM	81	80
3	Naive Bayes	74.2	73
4	Decision Tree	76.5	75
5	Random Forest	83.5	82
6	Neural Network	82	81

SERVICE REQUEST RESOLUTION

AI NLP to resolve 300K requests for missed service

Address resolution used regular expression (REGEX) to resolve ambiguity in the address

Accuracy improves from ~84% to 97% (mail v check)

REGEX Examples

1. Data Preprocessing

1. Clean and standardize address formatting (e.g. case, punctuation, abbreviations).
2. Use libraries like usaddress to parse addresses into components.

2. Normalization

1. Use a service like USPS's API or libraries to normalize addresses to a standard format.
2. Example: Convert "123 Elm Street Apt 2B" to "123 Elm St #2B."

3. Duplicate Detection

1. Compare cleaned and normalized addresses, fuzzy matching, near-exact duplicates.

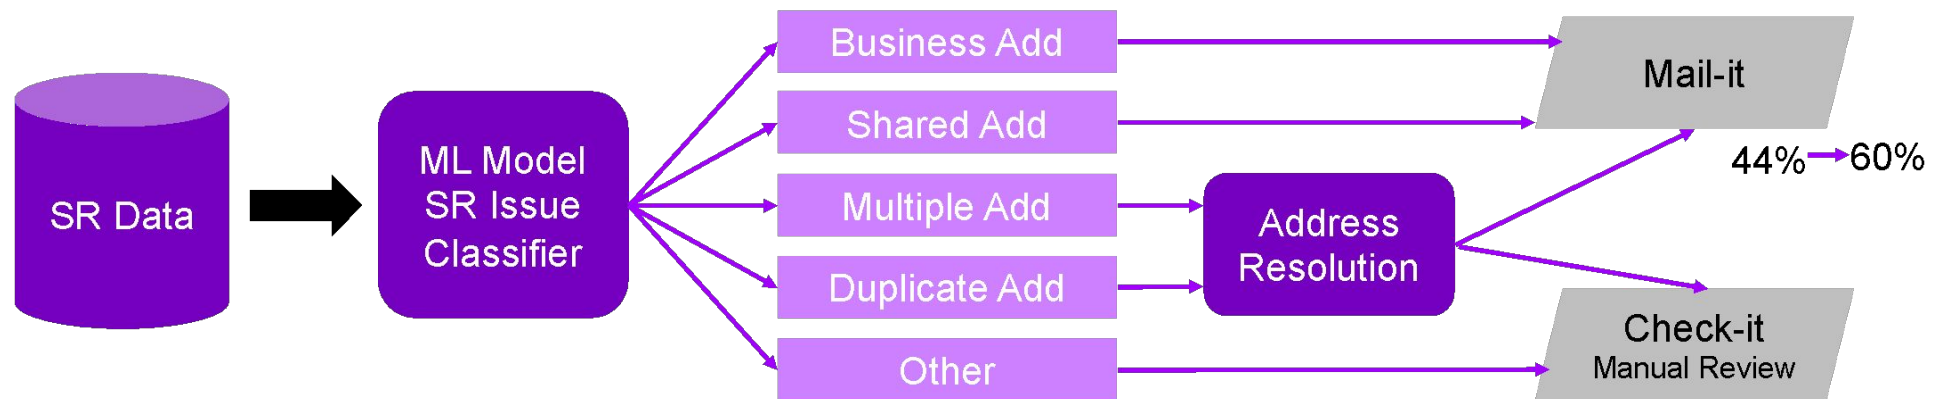

4. Alias Resolution

1. Check against database of known aliases.

5. Validation

1. Use USPS's address verification API or similar tools to confirm that the normalized address exists and is valid.

How Do You Implement Decisions?

Collaboration between business leaders and technical leaders, where both engage in problem solving can lead to more creative solutions to achieve real business end-goals.

Responsible/Ethical AI

EQUITY ANALYSIS

SR's, especially “multi” and “other” impact economically disadvantaged households at greater frequency.

From a responsible and ethical AI perspective, those that were most affected by address resolution issues were the most economically disadvantaged. Should we use AI?

Summary

- AI can provide a valuable tool for resolving a wide range of business problems.
- It is common for AI practitioners to try multiple algorithms and select the best performing.
- Performance, especially precision, is often limited by consistency in training data.
- High quality, consistent labeling is a business problem, not a technology problem.
- Successful business – technology communication can open creative solutions.
- It is common that failure to adopt AI in favor of status-quo is an unethical choice.
